

Crane Assisted Rigging Slings

Points to consider:

- Not all crane operators or contractors will allow you to use your own slings. They may require you to use theirs.
- Labeled slings that are inspected and are intuitively understandable and familiar to crane operators will increase their comfortability and trust in gear.
- Use equipment that lowers the risk for mistakes. Ask yourself does it SEE (Is it simple? Easy? Efficient?)

Key Features to Look for:

- Low Stretch
- Light-Weight
- Minimum chance for misconfiguration
- Color coded for length
- Sleeve cover protection for **ALL** eye or hardware connection points

Options:

Sling Options					
Quantity	Diameter	Construction	Length	Eye Diameter	Description
Dead Eye Sling Kit					
Working load up to 8,000 LBS (Shared Load Between 3 Dead Eye Slings)

Crane Assisted Rigging Slings

Please Note:

You can also include hardware connecting links such as steel shackles in your kits.

This list is provided to show options, always research the specific load and configuration requirements you will be using. It is your responsibility to select the appropriate equipment. Customized length, diameter, construction, and quantity may be required to meet your specific crane assisted rigging needs.
